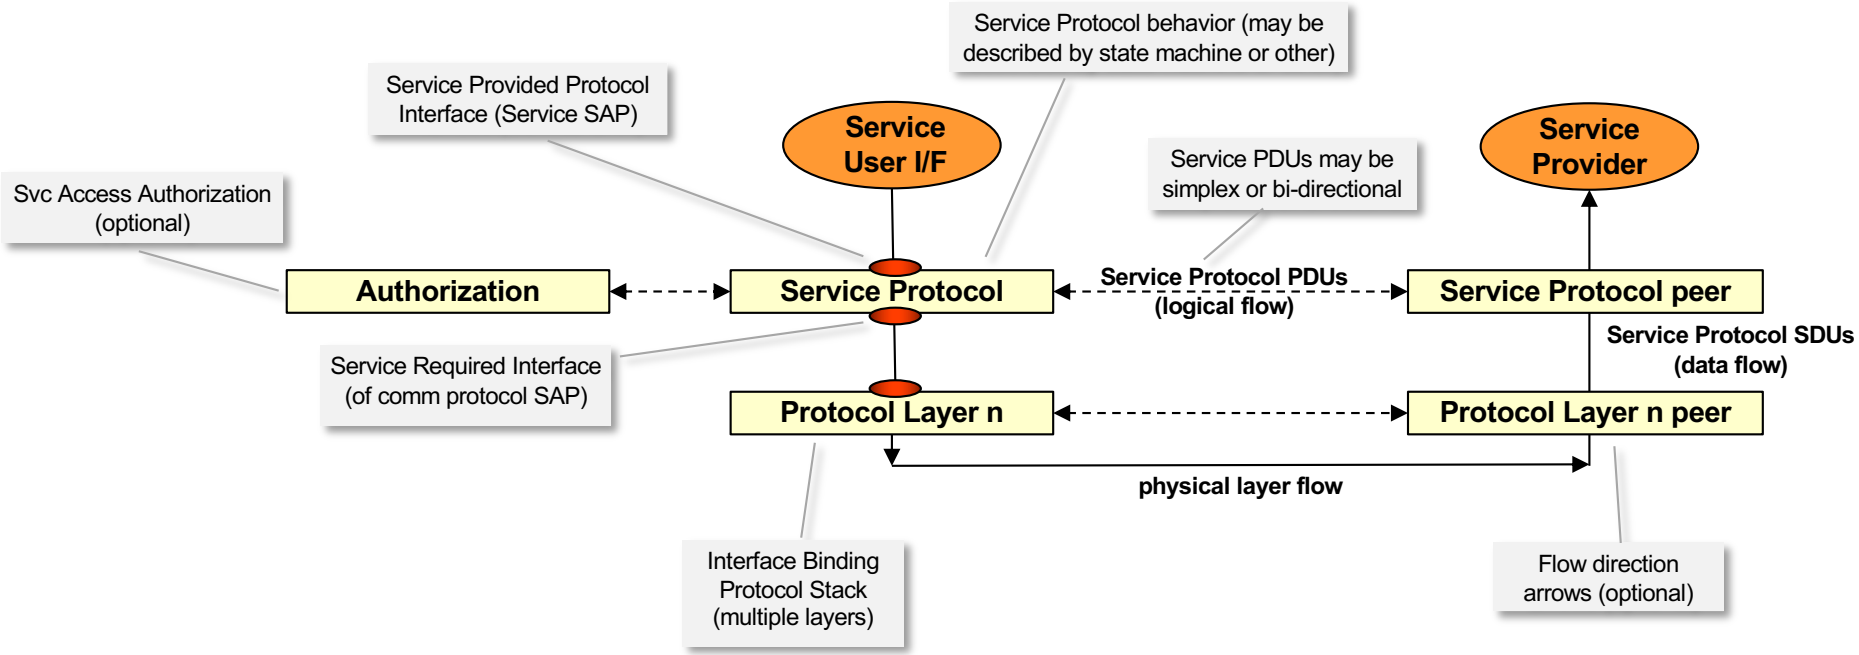
RASDS Service Protocol Representation



Specific and Generic Object Types and Containment:

- Function that offers a service
- Protocol — Denotes a (service or optional authorization) protocol layer (typically defined in a standard)
- Denotes a Service Access Point (SAP, required, usually defined in a standard or ICD)
- Denotes the actual flow of wrapped PDUs (as Service Data Units) between two layers
- Denotes a logical, peer to peer, protocol flow within a layer (Protocol Data Units)
