

Matt Cosby is Chief Technology Officer at Goonhilly Earth Station Ltd in the UK, where he works to expand the capabilities offered by Goonhilly for commercial deep space communications, orbit tracking, and the development of new communication systems, with an emphasis on communications around the Moon. He was previously the Chief Communications Engineer for the QinetiQ UK's space group, where he was responsible for technical leadership of the planetary communications team, including the UHF transceivers on ESA's Mars Missions. He has been the UK Space Agency representative for the CCSDS Space Link Protocols Working Group for 25 years. He is also the UK delegate for IOAG.
