

CSS-R-2020-10-001, *Resolution concerning revision of the CSTS WG charter*

The CSS Area,

CONSIDERING that the Cross Support Services Working Group (CSTS WG) has performed needed and necessary work to define an abstract model of member agency ground station functions in support of the published Cross Support Transfer Services--Monitored Data Service, 922.1-B-1;

and CONSIDERING that this model, the Functional Resource Model (FRM), has been registered with the SANA and is currently being reviewed by CCSDS technical experts;

and RECOGNIZING that the FRM informs the basis for future CSS Area recommendations to address standardized expression of cross support service configuration profiles and needed real-time adjustments of executing ground station functions;

and RECOGNIZING that the CSS Area Directory approves of the revision of the CSTS WG charter scope to include the FRM;

RESOLVES that the CCSDS Secretariat initiate the requisite CMC polling for authorization of the revised charter.
