# UQEB Values: Traffic Prioritization

The naming has been changed to avoid confusion.

## Value

Information Type	Values
Critical	0
High Priority	1 - 12
Low Priority	13 - 23
Unassigned	24 - $2^{64}-1$

# Traffic Prioritization Workflow

No changes

"High Priority" will only be serviced if "Critical" is empty, and "Low Priority" will only be accessed if both "Critical" and "High Priority" are empty

Weighted queueing is implemented within each type to avoid data starvation

# UQEB Values: Reliability

The reliability parameter only indicates the selection or configuration of CLA with respect to ARQ capabilities that the system should have.

If a bundle does not have a bundle storage class assigned, the class is taken as CLASS3 by default.

# Network QoS Extension Block

# QoS BP Extension Proposal

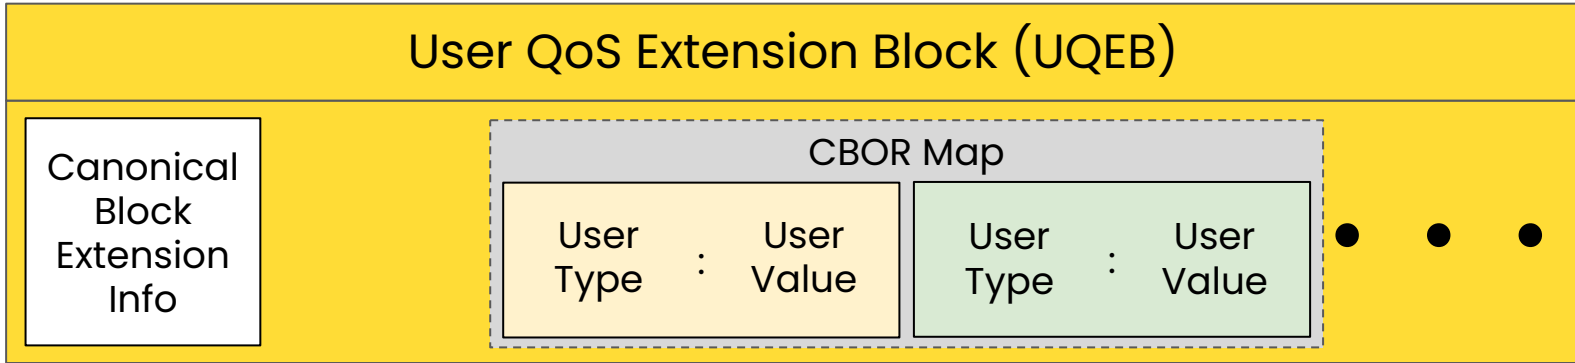

NQEB could translate UQEB into internal policy and optimize the decision process for the intermediate blocks of a network

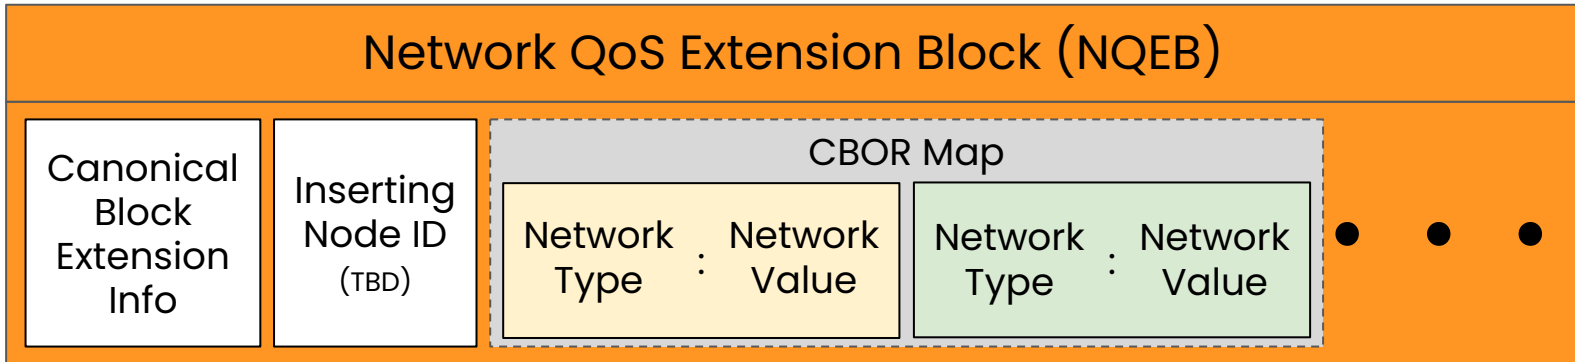

All values are reserved for local use to give the individual networks maximum flexibility
